STRATEGICALLY-LOCATED INLAND BARGE TERMINAL

- **Frequent, streamlined service.** RMT's strategic inland location serves customers in Central and Western Virginia with a barge service between ocean and inland terminals. The three-barge, six-day-per-week service has a combined capacity of 500 FEUs.
- **Efficient inland turn times.** The terminal's operational efficiency helps truckers maximize daily service schedules. RMT also provides ease of accessing and terminating empty containers at an inland versus ocean terminal.
- **Transload and cross-docking capabilities.** Transload and cross-dock services are available for container cargo transfers via rail or truck. The terminal also has covered and outside storage available for customers utilizing transload services.
- **Reducing emissions.** Customers are able to substantially reduce their CO2 emissions with the barge service versus all over-the-road inland movements.

INFRASTRUCTURE ENHANCEMENTS

- **Enhanced gate efficiency.** The terminal upgraded its gate throughput to allow for faster processing of trucks. (Completed in 2024)
- **Extended drop-lot access.** A new secured area was developed to provide truckers with the ability to drop off after hours for next-day processing. (Completed in 2024)
- **Expanded barge schedule, efficiency.** Lighting improvements will be installed to extend the barge loading/unloading schedule for faster turn times. (Estimated Completion - Q1 2025)
